Summary

This document provides the information necessary for a user to identify attribute fields, data formats, spatial reference, and contact information specific to the geospatial shapefile.

Description

To improve public health and the environment, the United States Environmental Protection Agency (USEPA) collects information about facilities, sites, or places subject to environmental regulation or of environmental interest. Through the Geospatial Data Download Service, the public is now able to download the EPA Geodata shapefile containing facility and site information from EPA's national program systems. The file is Internet accessible from the Envirofacts Web site (<http://www.epa.gov/enviro>). The data may be used with geospatial mapping applications. (Note: The shapefile omits facilities without latitude/longitude coordinates.) The EPA Geospatial Data contains the name, location (latitude/longitude), and EPA program information about specific facilities and sites. In addition, the file contains a Uniform Resource Locator (URL), which allows mapping applications to present an option to users to access additional EPA data resources on a specific facility or site.

Credits

This EPA Geospatial data set is generated from the following national environmental programs: Superfund National Priorities List (NPL) from the Compensation, and Liability Information System [CERCLIS] Resource Conservation and Recovery Act (RCRA) - Treatment, Storage, and Disposal Facilities (TSDF) [RCRAINFO], Large Quantity Generators (RCRA LQG) Air Facility System (AFS) Major dischargers of air pollutants Toxics Release Inventory (TRI) Program for 2004 - 2008 TRI Reporters [TRIS] National Pollutant Discharge Elimination System (NPDES) Majors from Integrated Compliance Information System [ICIS] National Pollutant Discharge Elimination System (NPDES) Majors from the Permit Compliance System [PCS] Assessment, Cleanup and Redevelopment Exchange System [ACRES] Section Seven Tracking System [SSTS] for the Pesticide Program as well as the State programs. The full list of programs is

listed under source information.

MEASURE DESCRIPTION

The data concern the location of facilities and sites that are regulated by, or of interest to, the EPA in conducting its regulatory mission. The information on the facilities and sites, including the locations, has been gathered from a number of sources. While EPA subjects the data to Quality Assurance (QA) procedures, the Agency cannot vouch for the reliability of all the data. Users of the data (or any portion thereof) may wish to verify its accuracy before use.

MEASURE DESCRIPTION

This view omits facilities without latitude/longitude coordinates. The geospatial tables from which the data are extracted contain 90% of the known universe of active records but does not contain exact point data for the remaining 10% of facilities.

PROCESS STEP ►

DESCRIPTION

The creation of this file geodatabase is an ongoing process that occurs on a monthly basis. Refer to the Publication date for the refresh date of the file. Data records contained within are each facility's representative point location. They have gone through the FRS Representative Point Processing steps and are considered the most spatially accurate

point location for each facility. Once a month, this file geodatabase is derived by exporting an Oracle view into a file geodatabase format using the ESRI ArcGIS Desktop and Safe's FME Desktop software. Only facilities with positional information (latitude and longitude values) are in the processed file geodatabase. More information about the Geospatial Model can be found at

<http://www.epa.gov/enviro/html/fii/documentation.html>. A single facility (based on the EPA Registry ID) can be regulated or participate in multiple EPA Programs and has a record in this file for each Program that it is in. Each record contains Program-specific information. The UPDATE_DATE field lists the date that this particular record was last updated. Also each Program has a refresh cycle. More information about each program refresh date can be found on the FRS website at http://ofmpub.epa.gov/apex/public_reports/f?p=ENVIRO_PUBLIC:2:1.

The Enforcement Criminal Records Management System, now called the Criminal Case Reporting System (CCRS), is the Criminal Investigation Division's "official record" of all criminal investigation activities. The system maintains and tracks case-specific program and investigative information on over 8,200 active and archived criminal cases. CCRS is an EPA-only system and data entry is performed directly by CID employees. The Public is allowed to obtain only select defendant data fields for closed, convicted cases via the Freedom of Information Act.

The Renewable Fuel Standard (RFS) Program encourages the blending of renewable fuels into our nation's motor vehicle fuel by establishing annual renewable fuel standards, responsibilities of refiners and other fuel producers, a trading system and other compliance mechanisms, and recordkeeping and reporting requirements. In addition to the rule, EPA has published a Regulatory Impact Analysis (RIA), which contains analyses of the economic and environmental impacts of the expanded use of renewable fuels under this program. A renewable fuel is defined as a motor vehicle fuel that is produced from plant or animal products or wastes, as opposed to fossil fuel sources.

The RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the best available air pollution technologies that have been required to reduce the emission of air pollutions from stationary sources. RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The 2006 IUR includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information. DESCRIPTION

The Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Department of Ecology. The system contains key information for each facility/site that is currently, or has been, of interest to the departments air quality, dam safety, hazardous waste, toxic cleanup, and water quality programs.

The Solid Waste Information System (SWIS) database contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For each facility, the database contains information about location, owner, operator, facility type, regulatory and operational status, authorized waste types, and local enforcement agency.

DETAILS FOR OBJECT [epa_environmental_hazard_site_v4](#) ►

* TYPE Feature Class

* ROW COUNT 3133345

DEFINITION

A datatable listing of site information

FIELD [ACCURACY_VALUE](#) ►

* ALIAS ACCURACY_VALUE

* DATA TYPE Integer

* WIDTH 4

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

The measure of the accuracy (in meters) of the latitude and longitude coordinates.

DESCRIPTION SOURCE

Summary Report of Locational Data Elements for the Latitude/Longitude Data Standard - Draft, dated 5/19/98, Data Element: Horizontal Accuracy Measure

Hide Field [ACCURACY_VALUE](#) ▲

FIELD [LATITUDE83](#) ►
