Summary

This document provides the information necessary for a user to identify attribute fields, data formats, spatial reference, and contact information specific to the geospatial shapefile.

Description

To improve public health and the environment, the United States Environmental Protection Agency (USEPA) collects information about facilities, sites, or places subject to environmental regulation or of environmental interest. Through the Geospatial Data Download Service, the public is now able to download the EPA Geodata shapefile containing facility and site information from EPA's national program systems. The file is Internet accessible from the Envirofacts Web site (<http://www.epa.gov/enviro>). The data may be used with geospatial mapping applications. (Note: The shapefile omits facilities without latitude/longitude coordinates.) The EPA Geospatial Data contains the name, location (latitude/longitude), and EPA program information about specific facilities and sites. In addition, the file contains a Uniform Resource Locator (URL), which allows mapping applications to present an option to users to access additional EPA data resources on a specific facility or site.

Credits

This EPA Geospatial data set is generated from the following national environmental programs: Superfund National Priorities List (NPL) from the Compensation, and Liability Information System [CERCLIS] Resource Conservation and Recovery Act (RCRA) - Treatment, Storage, and Disposal Facilities (TSDF) [RCRAINFO], Large Quantity Generators (RCRA LQG) Air Facility System (AFS) Major dischargers of air pollutants Toxics Release Inventory (TRI) Program for 2004 - 2008 TRI Reporters [TRIS] National Pollutant Discharge Elimination System (NPDES) Majors from Integrated Compliance Information System [ICIS] National Pollutant Discharge Elimination System (NPDES) Majors from the Permit Compliance System [PCS] Assessment, Cleanup and Redevelopment Exchange System [ACRES] Section Seven Tracking System [SSTS] for the Pesticide Program as well as the State programs. The full list of programs is listed under source information.

DATA QUALITY REPORT - CONCEPTUAL CONSISTENCY

MEASURE DESCRIPTION

The data concern the location of facilities and sites that are regulated by, or of interest to, the EPA in conducting its regulatory mission. The information on the facilities and sites, including the locations, has been gathered from a number of sources. While EPA subjects the data to Quality Assurance (QA) procedures, the Agency cannot vouch for the reliability of all the data. Users of the data (or any portion thereof) may wish to verify its accuracy before use.

DATA QUALITY REPORT - COMPLETENESS OMISSION

MEASURE DESCRIPTION

This view omits facilities without latitude/longitude coordinates. The geospatial tables from which the data are extracted contain 90% of the known universe of active records but does not contain exact point data for the remaining 10% of facilities.

DATA QUALITY REPORT - ABSOLUTE EXTERNAL POSITIONAL ACCURACY

DIMENSION **horizontal**

MEASURE DESCRIPTION

Positional accuracy for the data set varies for individual features based on collection method and source scale. Actual horizontal positional accuracy for the data set is unknown.

DATA QUALITY REPORT - ABSOLUTE EXTERNAL POSITIONAL ACCURACY

DIMENSION **vertical**

MEASURE DESCRIPTION

Actual vertical positional accuracy for the data set is unknown.

Lineage

PROCESS STEP

WHEN THE PROCESS OCCURRED **2011-01-25**

DESCRIPTION

Data records contained within are a materialized view based on the EPA geospatial tables which are refreshed based on the record's Last Reported Date field. The view is based on a join of the facility site table and the interest table to include the universe of interest types per program system id. Data records that do not contain positional information (latitude and longitude values) are not in this view.

PROCESS STEP

WHEN THE PROCESS OCCURRED **2011-01-25**

DESCRIPTION

Metadata information is imported into the shapefile using the EPA Metadata Editor Tool.

The 2006 IUR includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information. The purpose of the IUR program is to collect quality screening-level, exposure-related information on chemical substances and the IUR data are used to support risk screening, assessment, priority setting and management

The Renewable Fuel Standard (RFS) Program encourages the blending of renewable fuels into our nation's motor vehicle fuel by establishing annual renewable fuel standards, responsibilities of refiners and other fuel producers, a trading system and other compliance mechanisms, and recordkeeping and reporting requirements. In addition to the rule, EPA has published a Regulatory Impact Analysis (RIA), which contains analyses of the economic and environmental impacts of the expanded use of renewable fuels under this program. A renewable fuel is defined as a motor vehicle fuel that is produced from plant or animal products or wastes, as opposed to fossil fuel sources.

The RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "best available" air pollution technologies that have been required to reduce the emission of air pollutions from stationary sources. RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

FIELD UPDATE_DATE

- * ALIAS UPDATE_DATE
- * DATA TYPE Date
- * WIDTH 8
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

A system-generated value that represents the most recent calendar date and time the corresponding information was updated in the database.

DESCRIPTION SOURCE

FRS Development Team, March 2002.

FIELD LAST_REPORTED_DATE

- * ALIAS LAST_REPORTED_DATE
- * DATA TYPE Date
- * WIDTH 8
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

The most recent date the corresponding environmental interest data was reported to the Source of Data.

DESCRIPTION SOURCE

FRS Development Team, April 2000.

FIELD FAC_URL

- * ALIAS FAC_URL
- * DATA TYPE String
- * WIDTH 66
- * PRECISION 0
- * SCALE 0

FIELD COUNTY_NAME

- * ALIAS COUNTY_NAME
- * DATA TYPE String
- * WIDTH 35
- * PRECISION 0
- * SCALE 0

FIELD DESCRIPTION

The county name for the facility for which latitude and longitude coordinates were assigned through the best pick process.
