Summary

Critical habitat are areas considered essential for the conservation of a listed species. Federal agencies are required to consult with the U.S. Fish and Wildlife Service on actions they carry out, fund, or authorize to ensure that their actions will not destroy or adversely modify critical habitat. These areas provide notice to the public and land managers of the importance of these areas to the conservation of a listed species. Special protections and/or restrictions are possible in areas where Federal funding, permits, licenses, authorizations, or actions occur or are required.

Description

When a species is proposed for listing as endangered or threatened under the Endangered Species Act, the U.S. Fish and Wildlife Service must consider whether there are areas of habitat believed to be essential to the species' conservation. Those areas may be proposed for designation as "critical habitat." Critical habitat is a term defined and used in the Act. It is a specific geographic area(s) that contains features essential for the conservation of a threatened or endangered species and that may require special management and protection. Critical habitat may include an area that is not currently occupied by the species but that will be needed for its recovery. An area is designated as "critical habitat" after the Service publishes a proposed Federal regulation in the Federal Register and receives and considers public comments on the proposal. The final boundaries of the critical habitat are also published in the Federal Register.

Credits

The data found in this file were developed by the U.S. Fish & Wildlife Service field offices. For more information please refer to the species level metadata found with the individual shapefiles. The ECOS Joint Development Team is responsible for creating and serving this conglomerate file. No data alterations are made by ECOS.

Use limitations

None The GIS files and their associated coordinates are not the legal source for determining the critical habitat boundaries of species described within this dataset. Inherent in any data set used to develop graphical representations, are limitations of accuracy as determined by, among others, the source, scale and resolution of the data. While the Service makes every effort to represent the critical habitat shown with this data as completely and accurately as possible (given existing time and resource constraints), the USFWS gives no warranty, expressed or implied, as to the accuracy, reliability, or completeness of these data. In addition, the USFWS shall not be held liable for improper or incorrect use of the data described and/or contained herein. Graphical representations provided by the use of this data do not represent a legal description of the critical habitat boundary. The user is referred to the critical habitat textual description in the appropriate final rule for this species as published in the Federal Register. These data are to be used only in the context of the definition and purpose of critical habitat. This primarily relates to Section 7 consultation under the Endangered Species Act. These data may be used for planning and land management purposes. They are not to be used for legal survey use.

Data Quality

SCOPE OF QUALITY INFORMATION
 RESOURCE LEVEL dataset
 DATA QUALITY REPORT - TOPOLOGICAL CONSISTENCY
 EVALUATION METHOD
 Polygon and chain-node topology are present. Every polygon has a label.
 DATA QUALITY REPORT - CONCEPTUAL CONSISTENCY
 MEASURE DESCRIPTION
 Polygon and chain-node topology are present. Every polygon has a label.
 DATA QUALITY REPORT - COMPLETENESS OMISSION
 MEASURE DESCRIPTION
 Features represented have not been tested for completeness
 DATA QUALITY REPORT - QUANTITATIVE ATTRIBUTE ACCURACY
 MEASURE DESCRIPTION
 The source data was checked using standard review procedures. Attributes were checked by using visual inspection as well as automated verification routines. Quality of the attribute information varies with age and mapping protocols used when individual maps were prepared
 DATA QUALITY REPORT - ABSOLUTE EXTERNAL POSITIONAL ACCURACY
 DIMENSION horizontal
 MEASURE DESCRIPTION
 Data were collected using methods that have unknown accuracy (EPA National Geospatial Data Policy [NGDP] Accuracy Tier 10). For more information, please see EPA's NGDP at <http://epa.gov/geospatial/policies.html>
 DATA QUALITY REPORT - ABSOLUTE EXTERNAL POSITIONAL ACCURACY
 DIMENSION vertical
 MEASURE DESCRIPTION
 A formal accuracy assessment of the vertical positional information in the data set has either not been conducted, or is not applicable.

Lineage

PROCESS STEP
 DESCRIPTION
 Data is acquired from field offices responsible for developing individual species shapefiles. The shapefiles are then merged to create this all layers shapefile. For development of individual species shapefiles, please refer to that individual species' metadata.
